

## THE MIPSOS SECURITY GROUP

With a holistic approach to security, the MIPSOS Security Group offers consulting and training services focused on ensuring business continuity through cost effective protection and education. These services cover the **physical** aspects of protecting buildings, infrastructure and campuses, the **human** aspects of training and procedures and the benefits, selection and use of appropriate **technology**.

MIPSOS clients come from a variety of sectors:  
Police, military and intelligence • Rail, air and sea ports • Banks and high-value facilities • Government and states • Community and VIPs • National infrastructure and utilities • Schools and hospitals • Places of worship

**TOGETHER**  
**MAKING SENSE**  
**OF SECURITY**

## TOGETHER MAKING SENSE OF SECURITY

The PSOS Professional School of Security and M.I.P. Security are part of the MIPSOS Group of companies.

# CONSULTING

THE MIPSOS APPROACH TO PROTECTION ENCOMPASSES THREE KEY OVERLAPPING SECURITY DOMAINS:

### PHYSICAL

Encompassing the architecture, windows, structure, landscaping, perimeter, entrances, exits and all other physical elements.

### TECHNOLOGICAL

Surveillance, the control room, access control, screening equipment, alarm, detection systems, information security, and security related technology.

### HUMAN

Employees and security guards, routine and emergency procedures and training.

The holistic approach employed by MIPSOS is unique due to its equal focus on each of these domains. This ensures that buildings and campuses under our care incorporate innovative security solutions which are highly effective but usually inconspicuous. It also allows us to match protection elements with available budgets resulting in cost-effective solutions.

### SERVICES

MIPSOS offers a comprehensive range of security services and protection solutions for public, private and governmental establishments. It does so with maximum discretion, unparalleled technical capacity and consistent adherence to the current legislation in any given region.

#### MIPSOS SERVICES INCLUDE:

- In-depth Threat and Risk Analysis resulting in a prioritized list of areas to be addressed. This ensures effort is concentrated and available resources are maximized and is of particular interest to multi-site facilities where informed decisions must be taken on where to assign limited resources.
- Development of solutions adapted to each client's specific needs, integrating varied security solutions to maximize cost effectiveness and results.
- Skillful integration and balancing of the three essential building-blocks of a security system: Physical elements, technological means, and the human factor and optimal integration of security procedures into the clients daily routine.
- Building a dynamic system that adapts to changing conditions, potential risks and the political climate of an integral security plan.
- The development and upgrade of solutions such as blast, forced entry and bullet proof protected doors and windows, anti-ramming vehicle barriers and others. Some of MIPSOS solutions have been turned into commercial products and our engineers have registered several patents for their inventions.

# TRAINING

MIPSOS employs a unique, highly effective method of teaching integrated training including:

- Theoretical studies of the various aspects and branches of security through lectures and workshops
- Technical practice based on broad experience in security training. This allows acquisition of personal operational abilities in diverse scenarios
- Experience and application – applying theoretical and technical studies in simulation exercises derived from real-life situations, enabling the participant to become aware of his vulnerabilities and to learn how to correct them

All of the above are achieved through training and instruction by a team of veterans with vast training experience, knowledgeable in both government and private sectors worldwide. The MIPSOS team has made effective training its target and profession. Our clients have seen significant resulting improvements in their operational and command capabilities, both for security guards and for security management and supervisors.

MIPSOS offers training either in Israel or onsite at client facilities wherever they may be. Personnel from security companies, banks, commercial centers, high risk zones, police units and others have attended our courses worldwide.

## CASE STUDIES

### PHYSICAL SECURITY TRAINING FOR THE AUSTRALIAN POLICE

Due to 21st century terror activity world wide and specifically in East Asia, the Australian Police were looking for proactive solutions to face new threats. Today's terrorists are focused single mindedly on death, destruction and publicity with maximum casualties and no value for human life, and the Australian authorities needed to meet this challenge.

The Australian Police decided to enhance the skills and knowledge of trained police and counter-terror units in anti-terror physical protection elements that will provide the last line of defense if all other policing elements fail.

The Australian Police searched for an appropriate course across the world and selected our in-depth 10 month training program

The program included five onsite training sessions of one week each; with a period of practical assignment between each training session and at the end of the program, in

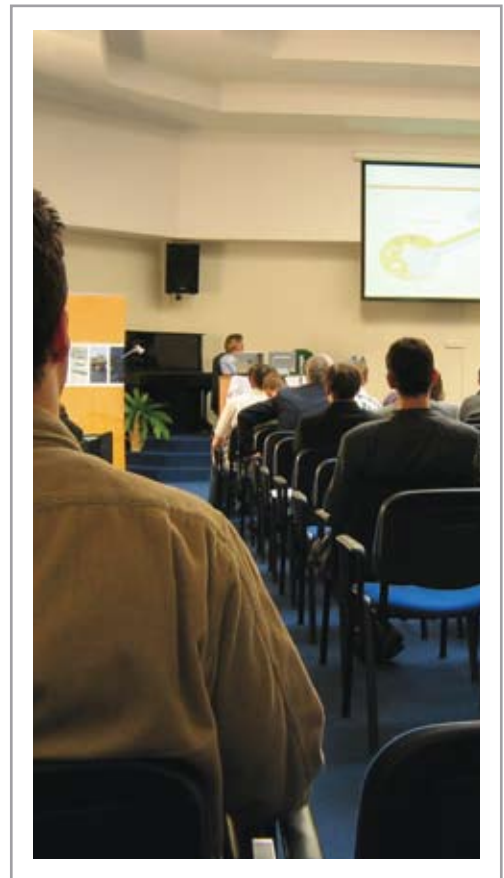

which we accompanied the participant in their projects on-site and remotely.

Since completion of the program the participants have the confidence and ability to effectively perform physical security audits and to identify vulnerabilities in facilities and sites under their jurisdiction.

### POLICE INTELLIGENCE COURSE FOR AN AUTONOMOUS COMMUNITY IN SPAIN

In order to operate more independently and reach an appropriate level of intelligence, the judicial police and detectives of an autonomous community in Spain selected MIPSOS to provide a three week - 140 hour intelligence course.

Today, as a result of the MIPSOS course, the judicial police unit which is in charge of police intelligence has achieved a superior level of information gathering. This has helped them maintain a high level of alert for terrorist threats, drugs and crime.

# Profile of the MIPSOS Security Group

The MIPSOS Security Group of companies includes PSOS, the Professional School Of Security recognized as a security training evangelist, MIP Security, a world leader in physical security consulting and project management, and PSOSonline.com which offers online courses and a security product portal.

## **PSOS (Professional School of Security)**

Founded in Israel in 1987, PSOS is run by a multidisciplinary team of international security experts with intelligence, security, army and police backgrounds. PSOS develops security training courses and operates from the conviction that in security, the human factor is the key to success and that properly trained personnel make the difference between the success or failure of a security operation. PSOS travels the world for training sessions at client sites and also hosts courses in Israel.

## **MIP Security** **M.I.P.** **SECURITY**

Experts in blast Mitigation, MIP Security are dedicated to protecting people and assets ensuring safety, security and business continuity. MIP Security specializes in physical security and has been called upon by governments and corporations worldwide to undertake a wide variety of protection consulting projects. MIP Security have been present after many of the major attacks against civilians during the past decade and are world renowned for their ability to analyze risks and recommend effective protection and security. MIP Security was founded in 1996

## **PSOSonline.com**

PSOS established the PSOSonline.com interactive security portal to bring together public and private security professionals in an on-line community. PSOSonline.com provides updated professional security information and the latest concepts and news regarding security and offers subscribers the opportunity to purchase on-line security training sessions based on 20 years of experience as a leading security training center.

The contents on this user friendly website include interviews, articles and analysis of security events, monthly reports of risk analysis on the security and geopolitical situation of countries on 5 different continents, conferences with world renowned professionals, consultations with security experts, news and information on innovative technological solutions in security, forums for exchanging knowledge and a directory of companies and products.
